

# Building a toy web MVC framework using PHP

habeeb @ perwad.in

all images are stolen from the internet

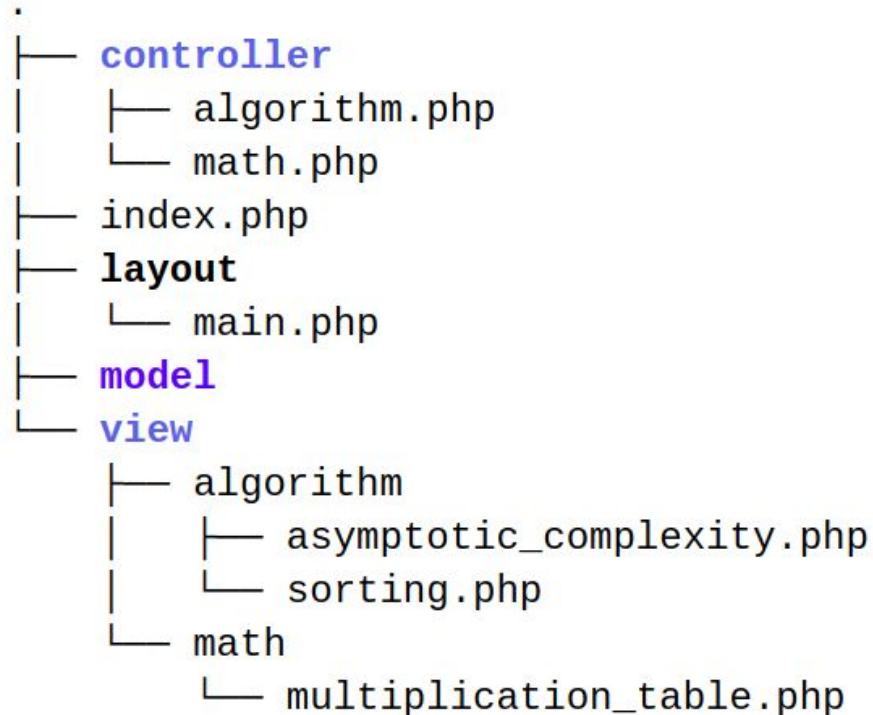

# Why you shouldn't build your own MVC for your next project?

1. Reinvent the wheel!
2. Community, documentation and maintenance.
3. Focus on the task at hand not on technology/framework.

# Why you should build your own MVC?

1. Demystify the MVC framework you are using.
2. For better debugging
3. You got a great idea to obsolete MVC architecture.
4. It is a fun!

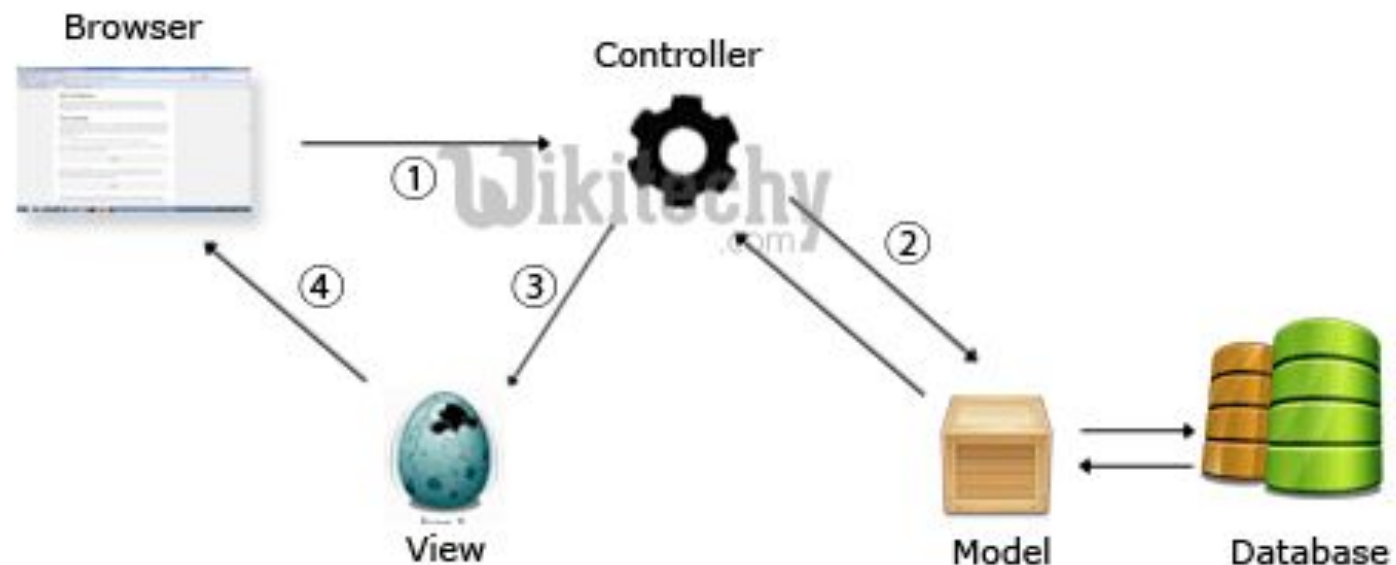

# Framework or bunch of PHP files

# Leaky abstraction

- It is an abstraction that exposes details and limitations of its underlying implementation to its users that should ideally be hidden away.

## The Model-View-Controller architecture

# MVC Features

- Clean URL and Routing
- Model, view and controller.
- Layout and View
- Configuration Parameters
- Security, caching and logging.
- **Convention over Configuration**

Time to  
**CODE !**
